

Student centric methods for enhancing learning experience

The student-centric learning approach supports student empowerment, conversations, critical thinking skills, independence and problem-solving techniques. Our college provides such kind of learning methods in which our classrooms are more interactive. The efficiency and the talent of the students are brought out using periodical tests, seminars, group discussions and making the students responsible participants of the class room. Field trips as well as PG level projects are included in the curriculum itself. We also incorporate the enquiry-based learning by which the students are allowed to ask questions. Students are also encouraged to work on open problems which would augment their analyzing capacity. The online learning materials such as handwritten notes pre-recorded presentations, videos and assignments are supplied through mail or WhatsApp. The students are permitted to work flexibly as cooperative groups to solve complex problems and an alumnus represents board of studies in designing curriculum so that, the students' interests are incorporated in curriculum. Since the teachers are the experts and key sources of knowledge, the students share the benefits of this knowledge. Also the experiential learning, participative learning and the problem-solving methods facilitate the student-centered learning process.
