GOVERNMENT ARTS COLLEGE (AUTONOMOUS)

KUMBAKONAM 612 002

Re - accredited With 'A' Grade by NAAC & Affiliated to Bharathidasan University

DEPARTMENT OF COMPUTER SCIENCE

(Effective for those admitted from 2020-2021 onwards)

SYLLABI

B.Sc., COMPUTER SCIENCE

DEPARTMENT OF COMPUTER SCIENCE

Name of the Programme: **B.SC COMPUTER SCIENCE**

Academic Year of Revision: 2020-2021

Programme Outcome (PO):

After the completion of this programme, the students will be able to

PO1: Apply knowledge of Computer Science in all relevant fields supposed to pursue during employment

PO2: Quantify all round skills and motivate for self-employment in applied branches of Computer science

PO3: Demonstrate, solve and understand the major concepts in all disciplines of Computer science. Become enabled as a pivot in the field capable of solving problem of any nature in real-time

PO4: Quantify fitful for decent employment in coveted positions of private and public sector bases and undertakings

PO5: Provide knowledge of fundamental principles in Computer Science that will provide a foundation for their later advanced courses and subjects like M.Sc Computer Science, MBA in specialized subjects and M.Sc Software science

Programme Specific Outcome (PSO):

After the completion of this programme, the students will be able to

PSO1: Face the job market with high augmented skills and capabilities

PSO2: Suggest measures to solve problems related to the field. Acquire knowledge across different areas of Computer science too

PSO3: Acquire deep knowledge in computer science and computational skills so that they can face boldly to qualify in exams like UPSC, TNPSC and Banking type examinations and other completive examinations conducted by both the Union and state governments

PSO4: Inculcate Computational Know-how in all aspects of approach and to tune skills thereof. To Start and succeed as an efficient Entrepreneur

PSO5: The advantage of studying this degree course is that the candidate can further pursue higher studies in the earmarked area and other specialized fields of application

B.Sc Computer Science– Course Structure

(For the Candidates admitted during the Academic Year 2020-2021 and onwards)

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - I

PROGRAMMING IN C

Subject Code: Credits: 4	External Marks: 75	Hours: 5
--------------------------	--------------------	----------

OBJECTIVE:

To make the students to understand the basic constructs and structures of C programming language including preliminaries, functions, statements, unions, files and pointers.

- **UNIT I:** Introduction to C Constants, Variables, Data types Operators and Expressions, Type Declarations, Arithmetic operators, Relational and Logical operators, Type conversions, Increment and Decrement operators, conditional operators, Bitwise operators, Assignment operators, Expressions, Conditional Expressions, Mathematical Functions.
- UNIT II: Managing Input and Output Operations Reading a Character, Writing a Character, Formatted Input Scan (), Formatted Output Pintf () etc. Decision Making and Branching Simple If Statement, IF ELSE, ELSE IF, Switch Case Statements, Break, Continue, GoTo and Labels. Decision Making and Looping. The WHILE Statement, DO Statement, The FOR Statement, Jumps in Loops etc.
- UNIT III: Fundamentals of Arrays, Elements of Arrays, Accessing of Arrays, Retrieval of Arrays Along Operations in Branching and Loops. Parameter of Passing of Arrays, One Dimensional Arrays. Two dimensional Arrays. Multi Dimensional Arrays. User Defined Function and Strings Calling a Function, Called a Function, Category of Function, Recursion, Function With Arrays. Parameter Passing of Functions, For (;;), Void (), Main () etc.
- **UNIT IV:** Structures and Unions Structure Definition Giving Values to Members, Initialization, Comparison of Structure Variables, Arrays of Structures, Arrays Within Structures, Structures Within Structures, Structures and Functions, Unions.
- **UNIT V:** Pointers File Management in C. Understanding Pointers, Accessing the Address of a Variable, Declaring, Initializing, Expressions of Pointers. Pointers and Arrays, Pointer and Functions, Pointer and Structures. Defining and Opening a File, Closing a file, I/O Operations in Files, Random Access to Files, Command Line Arguments.

COURSE OUTCOMES:

- ❖ Able to implement the algorithms and draw flowcharts for solving Mathematical and Engineering problems.
- ❖ To be able to develop C programs on windows/linux platform.
- ❖ Ability to design and develop Computer programs, analyzes, and interprets the concept of pointers, declarations, initialization, operations on pointers and their usage.
- ❖ Able to define data types and use them in simple data processing applications also he/she must be able to use the concept of array of structures. Student must be able to define union and enumeration user defined data types.
- Develop confidence for self education and ability for life-long learning needed for Computer language.

Balagurusamy, E., "Programming in ANSI C", Third Edition, Tata McGraw-Hill, 2006 (ISBN-0-07-053477-2)**TEXT BOOK:**

"The C Programming Language" – Brain W Kernighan Dennis M Ritchie – Eastern Economy Edition. **REFERENCE BOOK:**

Byron S Gottfried., "Programming With C", Shaum; S Outline Series – Tata McGraw Hill Publications, New Delhi.

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - I

LAB-I: PROGRAMMING IN C LAB

OBJECTIVES:To create excellent programs in various aspects of C Language.

EXPERIMENTS:

- 1. To creates Temperature conversion from Fahrenheit to Celsius & Celsius to Fahrenheit.
- 2. To explain the solutions of a Quadratic equation in all cases.
- 3. To explain the sum of series by using math functions in Sine, Cosine, Tangent and Exponential etc.
- 4. To Read and Print the characters and stringsby using scanf (),printf () format codes of I/O functions.
- 5. To create Pay bill calculations by using Switch Case Expressions, etc.
- 6. To create an Illustration of Nested Loops along with Break and Continue.
- 7. To create an Ascending & Descending order of Numbers by using Arrays.
- 8. To create a program for Sorting of Names in the Alphabetical order.
- 9. To create matrix Array of Addition subtraction multiplication by using various functions.
- 10. To create a program using Arrays within the Structure.
- 11. To create a program using Structures as Function Parameters.
- 12. To create a program for Book shop Inventory.
- 13. To create a program using Accessing Addresses of variables.
- 14. To create a program for Pointers as Function Parameters.
- 15. Writing Reading from a File operation in the C language.

COURSE OUTCOMES:

- Understanding a concept of functional hierarchical code organization.
- Ability to define and manage data structures based on problem subject domain.
- Ability to work with textual information, characters and strings.
- Ability to work with arrays of complex objects.
- Understanding a concept of object thinking within the framework of functional model.
- Understanding a defensive programming concept. Ability to handle possible errors during program execution.

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - II

C++ AND DATA STRUCTURES

Subject Code: Credits: 4	External Marks: 75	Hours: 5
--------------------------	--------------------	----------

OBJECTIVE:

The objective of course is to develop programming skills of students, using object oriented programming concepts, learn the concept of class and object using C++ and develop classes for simple applications.

UNIT I:

Basic Concepts of Object- Oriented Programming - Benefits of OOP - Object Oriented Languages - Applications of OOP - Structure of C++ Program - Tokens and Expressions: Scope Resolution Operator, Member Dereferencing Operators, Memory Management Operators, Type Cast Operator, Expressions and Implicit Conversions, Operator Precedence, Functions in C++: Main Function, Function Prototyping, Call By Reference, Return By Reference, Inline Functions, Function Overloading

UNIT II:

Classes and Objects: Specifying a Class, Defining Member Functions, Making an Outside Function Inline, Nesting of Member Functions, Arrays within a Class, Arrays of Objects, Objects as Function Arguments, Friendly Functions, Returning Objects—Constructors and Destructors: Constructors, Parameterized Constructors, Multiple Constructors in a Class, Copy Constructor, Destructors.

UNIT III:

Operator Overloading and Type Conversions: Defining Operator Overloading, Overloading Unary Operators, Overloading Binary Operators, Manipulation of Strings Using Operators, Rules for Overloading Operators, Type ConversionsInheritance: Introduction, Defining Derived Classes, Single Inheritance, Multilevel Inheritance, Multiple Inheritance, Hierarchical Inheritance, Hybrid Inheritance

UNITIV:

Introduction to data structure, Arrays:Introduction – array operations – number of elements in an array – representation of arraysin memory.Stacks: Introduction – stack operations – applications. Queues: Introduction – operation of queues – circular queues – applications. Linked Lists: Introduction – singlylinked list – circularly linked list – doubly linked list – multiply linked list.

UNIT V: Internal Sorting: Introduction - bubble sort - insertion sort - selection sort - merge sort - quick sort - heap sort. Searching: Introduction - linear search - transpose sequential search - interpolation search - binary search - Fibonacci search.

COURSE OUTCOMES:

- Identify importance of object oriented programming and difference between structured oriented and object oriented programming features.
- Able to make use of objects and classes for developing programs.

• Able to use various object oriented concepts to solve different problems.

• Understand basic Data Structures such as array, linked list, stack and queues.

TEXT BOOK: Balagursamy E, Object Oriented Programming with C++, Tata

McGraw Hill Publications, Sixth Edition, 2013

Data Structures and algorithms – G.A. VijayalakshmiPai (G A V PAI)–

Taba McGraw-Hill Publishing company limited.

REFERENCE BOOKS: Ashok Kamthane, Programming in C++, Pearson Education, 2013.

Fundamentals of Data structure - Ellis horowwiz, Sartajsahni and

SenguthevarRajasekaran.

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - II

LAB-II: DATA STRUCTURES LAB USING C++

Subject Code:	Credits: 3	External Marks: 60	Hours: 4
---------------	------------	--------------------	----------

OBJECTIVE:

Have a good overall understanding of basic data structures, their design and analysis. Know how to implement many of them in C++, and use them in other applications.

EXPERIMENTS:

1. SORTING:

- a. Bubble Sort
- b. Insertion Sort
- c. Selection Sort
- d. Heap Sort
- e. Quick Sort

2. SEARCHING:

- a. Linear Search
- b. Binary Search
- 3. Matrix Manipulations
- 4. Polynomial Addition & Multiplication
- 5. Operations on Stack and Conversion of expressions
- 6. Operations on Queue
- 7. Operations on Linked List
- 8. Operations on Doubly Linked List

COURSE OUTCOME:

Ability to understand data structure techniques and to develop applications using C++.

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - III

JAVA PROGRAMMING

OBJECTIVE:

- To introduce the object oriented programming concepts.
- To understand object oriented programming concepts, and apply them in solving Problems.
- To introduce the principles of inheritance and polymorphism; and demonstrate how they relate to the design of abstract classes.
- To introduce the implementation of packages and interfaces.
- To introduce the concepts of exception handling and multithreading.
- To introduce the concepts of Collection Framework.
- To introduce the design of Graphical User Interface using applets and swing controls.
- Fundamentals of Object Oriented Programming: Basic Concepts–Constants Variables –Data types Declaration of Variables Giving values to Variables Scope of Variables –Symbolic Constants –Type Casting. Operators Arithmetic Operators Relational Operators Logical Operators –Assignment Operators Increment and Decrement Operators Conditional Operators Bitwise Operators Special Operators.
- UNIT II: Decision Making and Branching: Decision Making with if Statement –Simple if Statement –The if…else Statement –Nesting of if…else Statement –The else if Ladder –The Switch Statement –The Conditional Operator. Decision Making and Looping: Introduction –The While Statement –The do Statement –The For Statement –Additional features of for loop–Nested of for loops –Jump in Loops Jumping out of a loop –Skipping a part of a loop.
- UNIT III: Classes, Objects and Methods: Defining a Class —Adding Class Members Accessing Class Members Constructors —Methods Overloading —Static Members —Nesting of Methods Inheritance —Overriding Methods —Final Variable and Methods —Final Variable and Methods —Final Classes Finalizer Methods Abstract Methods and Classes —Array and String —Arrays One Dimensional Arrays —Two Dimensional Arrays —String Arrays.
- UNIT IV: Interfaces and Multiple Inheritance –Defining Interfaces –Extending Interfaces Implementing Interfaces –Accessing Interface Variables –Packages –Java API Packages –Using System Packages –Creating and Accessing Packages –Adding class to a Packages –Multi Threaded Programming –Creating Threads –Extending the thread class –Stopping and blocking a Thread –Life cycle of a thread.

UNIT V: Managing Errors and Exceptions –Types Of Errors –Exceptions –Syntax of Exception handling code –Multiple Catch Statements –Using Finally Statement – Throwing Own Exceptions. Applet Programming –Local and Remote Applets – Building Applets Code –Applet Life cycle– Designing a Web Page –Adding applet of HTML File –Running the applet Managing Input/output files in Java – Stream Classes –Byte Stream Classes –Character Stream Classes –Creation of Files –Reading/Writing Characters –Reading/Writing Bytes.

COURSE OUTCOMES:

- Able to understand the use of OOPs concepts.
- Able to solve real world problems using OOP techniques.
- Able to understand the use of abstraction.
- Able to understand the use of Packages and Interface in java.
- Able to develop and understand exception handling, multithreaded applications with synchronization.
- Able to understand the use of Collection Framework.
- Able to design GUI based applications and develop applets for web applications.

TEXT BOOK: Programming with JAVA, E.Balagurusamy, Tata McGraw-Hill

Publishing Company Limited, New Delhi.

REFERENCE BOOK: Java 2: The Complete Reference, Fifth Edition, Herbert Schildt,

Tata McGraw- Hill Publishing Company Limited, New Delhi.

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - III

LAB-III: JAVA PROGRAMMING LAB

Subject Code: Credits: 3 External Marks: 60 Hours: 4

OBJECTIVES:

- To build software development skills using java programming for real world applications.
- To implement frontend and backend of an application
- To implement classical problems using java programming.

EXPERIMENTS:

- 1. Write a program to sort the given numbers using Arrays.
- 2. Write a program to implement the FIND and REPLACE operations in the given multiple text.
- 3. Write a program to implement a calculator to perform basic Arithmetic Operations.
- 4. Write a program to find the area of a rectangle using Constructor.
- 5. Write a program to find the student's percentage and grade using Command Line Arguments.
- 6. Write a program to draw circle or triangle or square using Polymorphism and Inheritance.
- 7. Implement multiple inheritance concepts in java using Interface, you can choose your own example of a company or education institution or a general concept which requires the use of Interface to solve a particular problems.
- 8. Write a program to create threads and assign priorities to them
- 9. Write a program to develop an applet to play multiple audio clips using Multithreading.
- 10. Write a program to create a window with three check boxes called red, green and blue. The applet should change the colors according to the selection.

COURSE OUTCOMES:

- Knowledge of the structure and model of the Java programming language.
- Use the Java programming language for various programming techniques.
- Develop software in the Java programming language.
- Evaluate user requirements for software functionality required todecide whether the Java programming language can meet userrequirements.
- Propose the use of certain technologies by implementing them in the Java programming language to solve the given problem.

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - IV

DATABASE MANAGEMENT SYSTEMS

Subject Code:	Credits: 5	External Marks: 75	Hours: 5
---------------	------------	--------------------	----------

OBJECTIVE: To provide the basic concepts of the Database systems including data models,

Storage Structure, Normalization and SQL.

UNIT 1: Introduction Database - Systems Applications - Purpose of Database Systems - View of

data - Database Languages - Data Storage and Querying - Database Architecture -

History of Database Systems.

UNIT 2: Relational Model: Structure of Relational Database – Fundamental Relational Algebra –

Additional Relational Algebra Operations – Extended Relational Algebra Operations –

Null Values – Modification of the Database.

UNIT 3: SQL: Overview of the SQL Query Language – SQL Data Definition – Basic Structure of

SQL Queries - Set Operations - Aggregate Functions - Null Values - Nested Sub

Queries – Views- Modification of the Database – Join Relations.

UNIT4: Database Design and the E-R Model: Overview of the Design Process – The Entity

Relationship Model–Entity Relationship Diagrams – Entity Relationship Design Issues

- Constraints - Reduction to Relational Schemas - Other Aspects of Database Design.

UNIT 5: Relational Database Design: Features of Good Relational Designs – Atomic Domains and

First Normal Form – Decomposition Using Functional Dependencies – Functional

Dependency Theory – Modeling temporal data.

COURSE OUTCOMES:

- Describe the fundamental elements of relational database management systems
- Explain the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL.
- Design ER-models to represent simple database application scenarios
- Convert the ER-model to relational tables, populate relational database and formulate SQL queries on data.
- Improve the database design by normalization.

TEXT BOOK: Database Systems Concepts, Fifth edition, Abraham Silberschatz, Henry

F.Korth, S. Sudarshan, McGraw-Hill-2006.

REFERENCE BOOKS: DBMS Designing and Business Applications GERALD V. POST-

McGraw Hill publications.

GOVERNMENT ARTS COLLEGE (AUTONOMOUS), KUMBAKONAM. B.Sc.(COMPUTER SCIENCE)

LAB-IV: RDBMS (MySQL)

Subject Code: Credits: 3 External Marks: 60 Hours: 3	
--	--

OBJECTIVE:

- 1. To explain basic database concepts, applications, data models, schemas and instances.
- 2. Describe the basics of SQL and construct queries using SQL.
- 3. To emphasize the importance of normalization in databases.
- 4. To facilitate students in Database design
- 5. To familiarize issues of concurrency control and transaction management.

EXPERIMENTS:

- 1. Creating & updating and inserting into database & simple queries.
- 2. Uses of Select statement for queries.
 - a. AND' OR' NOT Operators' WHERE clause.
 - b. UNION' INTERSECTION' MINUS.
 - c. Sorting and grouping.
- 3. Nested queries using SQL.
 - a. Sub queries.
 - b. Join.
- 4. Built-in-functions of SQL.
- 5. Use of indexes' creating views and querying in views.
- 6. Cursors' triggers and stored procedures and functions.
- 7. Case studies:
 - a. Student evaluation systems.
 - b. Pay roll system
 - c. Income tax calculations.
 - d. Seat reservation Problems
 - e. Mark sheet Preparation.

COURSE OUTCOME:

- Apply the basic concepts of Database Systems and Applications.
- Use the basics of SQL and construct queries using SQL in database creation and interaction.

Skill Based Elective - I

ESSENTIALS OF LANGUAGE AND COMMUNICATION

OBJECTIVES:

- The course should enable the students to:
- Develop English language skills in multidisciplinary areas.
- Communicate in an intelligible English accent and pronunciation.

UNIT-I

GENERAL INTRODUCTION AND LISTENIG SKILLS

Introduction to communication skills; Communication process; Elements of communication; Soft skills vs hard skills; Importance of soft skills for engineering students; Listening skills; Significance; Stages of listening; Barriers to listening

UNIT-II

SPEAKING SKILLS

Significance; Essentials; Barriers and effectiveness of speaking; Verbal and non-verbal communication; Generating talks based on visual prompts; Public speaking; Addressing a small group or a large formal gathering; Oral presentation; Power point presentation.

UNIT-III

VOCABULARY & GRAMMAR

Vocabulary:

The concept of Word Formation; Root words from foreign languages and their use in English; Acquaintance with prefixes and suffixes from foreign languages in English to form derivatives; Synonyms; Antonyms; Standard abbreviations; Idioms and phrases; One word substitutes.

Grammar:

Sentence structure; Uses of phrases and clauses; Punctuation; Subject verb agreement; Modifiers; Articles; Prepositions.

UNIT-IV

READING SKILLS

Significance; Techniques of reading; Skimming-Reading for the gist of a text; Scanning - Reading for specific information; Intensive; Extensive reading; Reading comprehension;; Reading for information transfer; Text to diagram; Diagram to text.

UNIT-V

WRITING SKILLS

Significance; Effectiveness of writing; Organizing principles of Paragraphs in documents; Writing introduction and conclusion; Techniques for writing precisely; Letter writing; Formal and Informal letter writing; E-mail writing, Report Writing.

Course Outcome: By the end of the course, the students will be able to:

- 1. Understand and extract the essential information from a written or spoken text on a familiar topic
- 2. Scan a short written text for specific information
- 3. Control a range of isolated words and phrases dealing with concrete everyday topics like hobbies, shopping, food and eating , weather and seasons , household goods , city and country life , etc.
- 4. Perform a variety of social functions including greetings, introductions and farewells, making and responding to requests, suggestions, invitations and apologies, conducting simple transactions in shops and offices, asking for and giving directions, etc
- 5. Describe people, places, likes and dislikes and daily routines in a series of simple phrases and sentences
- 6. Construct short and simple descriptive paragraphs about people, places and events.
- 7. Write a clear topic sentence for a paragraph.
- 8. Understand the form and function of the basic official correspondences.

Text Books:

Handbook of English for Communication (Prepared by Faculty of English, IARE)

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - V

DIGITAL COMPUTER FUNDAMENTALS ANDMICROPROCESSORS

OBJECTIVE:

To disseminate knowledge of digital principles, combinational and sequential logicfundamentals, to introduce microprocessor, its principles and its applications to undergraduate students of computer science and applications

UNIT I:

Number Systems and Codes: Binary, Octal and Hexadecimal Number Systems-Conversion between number systems- Complements - Binary Arithmetic- Binary CodesBoolean Algebra and Logic Gates: AND, OR, NOT, NAND, NOR, XOR, XNOR gates – Truth tables- Applications of XOR gates- Fundamentals of Boolean Algebra- Booleanfunctions- Minterms and Maxterms.

UNIT II:

Boolean Laws and Expressions: Laws and theorems of Boolean algebra-Demorgan's theorems - the Universal building blocks – NAND and NOR gates -Canonical SOP and POS forms - Algebraic simplification-Karnaugh Maps - SOP and POS Simplification - NAND / NOR implementation of Boolean expressions-Don't care conditions - Overlapping, Rollinggroups, eliminating redundant groups.

UNIT III:

Combinational Logic Circuits: Half and FullAdders- Half and Full Subtractors-Parallel binary adder- Multiplexer & De-Multiplexer-Encoder & Decoder.Sequential Logic Circuits: NAND, NOR latches- SR Flipflop-JK Flipflop – Edge triggering- PRESET and CLEAR inputs- Shift Register, - Intermediary to Binary Counters -Asynchronous Forms- BCD counter.

- UNIT IV: Microprocessor architecture: Introduction- Intel 8085: ALU-Timing and
 Controlunit Registers-Data and Address Bus-Pin configuration-Intel 8085
 instructions—Instruction cycle- Timing diagram- RISC and CISC processors.
- UNIT V: Instruction Set for Intel8085: Instruction and Data formats- Addressing modes-Status Flags- Intel 8085instruction groups. Assembly Language Programming: Addition- Subtraction- Decimal addition /subtraction- Complement Arithmetic-Shifting – Masking- concept of Arrays and operationon array values- Sum of Series – Multiplication – Division- Multibyte addition / subtraction.

COURSE OUTCOME:

- Describe the various structures of various number systems and its application in digital design.
- Develop the appropriate truth table from a description of a combinational logic function.
- Implement combinational logic function described by a truth table using and/or/inv gates, muxes or ROMs, and analyze its timing behavior.
- Describe the operation and timing constraints for latches and registers.
- Design memory organization that uses banks for different word size operations.

TEXT BOOKS:

- 1. Thomas Bartee C, Digital Computer Fundamentals. TMH, 3rd Edition
- 2. Malvino and Leech, Digital principles and Applications, TMH, 2nd Edition
- 3. Badri Ram, Fundamentals of Microprocessors and Microcomputers, DhanpatRai Publications (P) Ltd, 4th Edition

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - V

DESIGN AND ANALYSIS OF ALGORITHMS

Subject Code:	Credits:	External Marks: 75	Hours:
---------------	----------	--------------------	--------

OBJECTIVE:

The student should be made to:

- Learn the algorithm analysis techniques.
- Become familiar with the different algorithm design techniques.
- Understand the limitations of Algorithm power.
- UNIT I: INTRODUCTION: Notion of an Algorithm Fundamentals of Algorithmic Problem Solving Important Problem Types –Fundamentals of the Analysis of Algorithm Efficiency Analysis Framework Asymptotic Notations and its properties Mathematical analysis for Recursive and Non-recursive algorithms.
- UNIT II: BRUTE FORCE: Selection sort and Bubble sort Closest-Pair and Convex-Hull Problems-Exhaustive Search Traveling Salesman Problem Knapsack Problem Assignment problem.
- UNIT III: DIVIDE-AND-CONQUER: Divide and conquer methodology Merge sort –
 Quick sort Binary search Multiplication of Large Integers Strassen"s Matrix
 Multiplication-Closest-Pair and Convex-Hull Problems.
- UNIT IV: DYNAMIC PROGRAMMING:Computing a Binomial Coefficient Warshall"s and Floyd" algorithm Optimal Binary Search Trees Knapsack Problem and Memory functions.
- UNIT V: GREEDY TECHNIQUE ITERATIVE IMPROVEMENT: Greedy Technique— Prim's algorithm- Kruskal's Algorithm-Dijkstra's Algorithm-Huffman Trees.

COURSE OUTCOME:

At the end of the course, the student should be able to:

- Design algorithms for various computing problems.
- Analyze the time and space complexity of algorithms.
- Critically analyze the different algorithm design techniques for a given problem.
- Modify existing algorithms to improve efficiency.

TEXT BOOK:

1. AnanyLevitin, "Introduction to the Design and Analysis of Algorithms", Third Edition, Pearson Education, 2012.

REFERENCES:

- 1. Thomas H.Cormen, Charles E.Leiserson, Ronald L. Rivest and Clifford Stein, "Introduction to Algorithms", Third Edition, PHI Learning Private Limited, 2012.
- 2. Alfred V. Aho, John E. Hopcroft and Jeffrey D. Ullman, "Data Structures and Algorithms", Pearson Education, Reprint 2006.

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - V

OPERATING SYSTEMS

Subject Code: Credits: External Marks: 75 Hours:
--

OBJECTIVE:

- To be aware of the evolution and fundamental principles of operating system, processes and their communication.
- To understand the various operating system components like process management, memory management and
- To know about file management and the distributed file system concepts in operating systems
- UNIT I: Introduction: what is an operating system?- system components OS services –
 System Calls- System Programs System Structure: Simple Structure Layered
 Approach Virtual Machines System Design and Implementation: Design Goals.
- UNIT II: Process Management: Process Concept Process Scheduling CPU Scheduling: Basic concept Scheduling Criteria Scheduling Algorithms Process Synchronization: The Critical Section problem Semaphores Deadlock: Deadlock Characterization Deadlock Prevention Deadlock avoidance Detection.
- UNIT III: Storage Management: Swapping Contiguous Memory management Paging Memory Management Segmentation Segmentation With Paging Demand Paging Page Replacement: Basic Scheme Various Replacement Algorithms-Thrashing.

UNIT IV: I/O Systems: I/O Hardware – Polling- Direct Memory Access – I/O Interrupt –
 Application I/O Interface – Kernal I/O Subsystem: I/O Scheduling – Buffering –
 Caching - Spooling.

UNIT V: OS Security: The Security Problems – User Authentication – Program Threads – System Threads – Securing Systems and Facilities – Intrusion Detection.

COURSE OUTCOME:

- Describe the general architecture of computers.
- Describe, contrast and compare differing structures for operating systems.
- Understand and analyse theory and implementation of: processes, resource control (concurrency etc.), physical and virtual memory, scheduling, I/O and files.

TEXT BOOK:

OPERATING SYSTEM CONCEPTS – Silberschatz, Galving, Gangne, Sixth Edition, Publication Wiley India.

REFERENCE BOOK:

- 1) System Programming and Operating System D.M Dhamdhere, Tata McGraw Hill publishing.
- 2) Dental H.M —Introduction to OS Addison Wesley Publishing Co, 1998.

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - V

DIGITAL ELECTRONICS AND MICROPROCESSORS LAB

ect Code: Cr	edits:	External Marks: 60	Hours:
--------------	--------	--------------------	--------

OBJECTIVE:

To make students know the fundamental principles behind digital electronics including basic gates, combinational and sequential logic and to introduce microprocessor, its principles and its applications on practical scope.

EXPERIMENTS:

DIGITAL ELECTRONICS LAB:

- 1. Basic gates using IC- AND, OR, NOT, NAND, NOR, XOR, XNOR gates.
- 2. Universal building blocks NAND Logic.
- 3. Combinational Logic Circuits: Half and Full Adders.
- 4. Combinational Logic Circuits: Half and Full Subtractors
- 5. Sequential Logic Circuits: NAND, NOR latches
- 6. JK Flip flop
- 7. Asynchronous counter

MICROPROCESSORS LAB - Assembly language programming:

- 8. Simple Addition / Subtraction
- 9. Decimal addition / subtraction
- 10. Complement Arithmetic

- 11. Shifting values / Masking values
- 12. Arrays operation Addition
- 13. Sum of Series
- 14. Double Precision Arithmetic

COURSE OUTCOME:

- Construct basic combinational circuits and verify their functionalities.
- Apply the design procedures to design basic sequential circuits.
- Learn about counters and Shift registers.

TEXT BOOKS:

- 1. Thomas Bartee C, Digital Computer Fundamentals. TMH, 3rd Edition
- 2. Malvino and Leech, Digital principles and Applications, TMH, 2nd Edition
- 3. Badri Ram, Fundamentals of Microprocessors and Microcomputers, Dhanpat Rai Publications (P) Ltd, 4th Edition

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - V

SOFTWARE ENGINEERING

Subject Code: Credits: External Marks: 75 Hours:	s: 75 Hours:
--	--------------

OBJECTIVES:

- Understanding of software requirements and the SRS documents.
- Understanding of the role of project management including planning, scheduling, risk management, etc.
- Understanding of different software architectural styles.
- Understanding of implementation issues such as modularity and coding standards.
- Understanding of approaches to verification and validation including static analysis, and reviews. Understanding of software testing approaches such as unit testing and integration testing.
- UNIT I: Introduction to Software Engineering: Definitions Size Factors Quality and Productivity Factors. Planning a Software Project: Defining the Problem Developing a Solution Strategy Planning the development Process The Phased Life Cycle Model The Cost Model The Prototype Life Cycle Model Planning an Organizational Structure Project Structure Programming Team Structure.
- UNIT II: Software Cost Estimation: Software Cost Factors Programmer Ability Product
 Complexity Product Size Available Time Required Level of Reliability –
 Level of Technology Software Cost Estimation Techniques Expert Judgment–
 Delphi Cost Estimation Work Breakdown Structure Algorithmic Cost Models.
 Staffing Level Estimation

UNIT III: Software Requirements Definition: The Software Requirements Specification—
 Formal Specification Techniques— Relational Notations — State Oriented
 Notations .Software Design: Fundamental Design Concepts — Abstraction —
 Information Hiding — Structure — Modularity Concurrency — Verification —
 Modules and Modularization Criteria — coupling and cohesion.

UNIT IV: Design Notations – Data Flow Diagrams – Structure Charts – HIPO Diagrams –
 Pseudocode Structured Flowcharts – Structured English – Decision Tables –
 Design Techniques – Stepwise Refinement – Structured design – Jackson Structured Programming – Implementation Issues - Structured Coding Techniques – Coding Style – Standard and Guidelines – Documentation Guidelines.

Verification and Validation Techniques: Quality Assurance – Walkthroughs and Inspections – Unit Testing and Debugging – System Testing – Software Maintenance - Enhancing Maintainability during Development – Managerial Aspects of Software Maintenance – Configuration Management.

COURSE OUTCOMES:

- Ability to apply software engineering principles and techniques.
- Ability to develop, maintain and evaluate large-scale software systems.
- To produce efficient, reliable, robust and cost-effective software solutions.
- Ability to perform independent research and analysis.
- Ability to work as an effective member or leader of software engineering teams.
- To manage time, processes and resources effectively by prioritising competing demands to achieve personal and team goals Identify and analyzes the common threats in each domain.
- Ability to understand and meet ethical standards and legal responsibilities.

TEXTBOOK: Software Engineering Concepts– Richard Fairley, 1997

SEMESTER - V

SYSTEM ANALYSIS AND DESIGN

Subject Code:	Credits:	External Marks: 75	Hours:
---------------	----------	--------------------	--------

Unit I

Business Problem & Computers: Overview of Business Organization – Information needs & systems – Some typical problems – System life cycle – System study – Feasibility Study

Unit II

System Analysis – Initiation of Analysis – The Process of Analysis – System Design – Design factors – Design Constraints – Processing Techniques – The Process of design – Output Design – input Design – Process Design – File Data Base Design

Unit III

Analysis & Design Tools – Data Flow Diagram – Data Dictionary – Entity Relationship Diagram – Decision Tree – Decision Table – Structured English – Structure Charts – Grid Charts – Layout Charts – Configuration Selection & Acquisition – Detailing the configuration – Storage requirements – Internal Memory – Processors – Terminals – Printers

Unit IV

File Organization & Design: Functional Classification of Files – File Structure – File Organization – Inverted File – Security & Controls – Risk management – Physical Security – Access Control – Data Control – Other Security & control measures

Unit V

Post – Design phases – Develop Software – Installation & Changes-over-System Operation & maintenance – Systems Applications – Financial Accounting – Inventory Accounting System – Equipment Maintenance – Bank Operations – Production Planning & control – Process Control – Robotics

Text Book:

1. System Analysis & Business Applications – Rajesh Nalk & Swapna Kishore, Wheeler Publishing – 1st edition 1994

Reference Book:

1.Introducing Systems Analysis & Design – Ellas M. Awad – Galgotia Publications (P) Ltd., (Second Edition)

SEMESTER - V

MANAGEMENT INFORMATION SYSTEM

Subject Code:	Credits:	External Marks: 75	Hours:
---------------	----------	--------------------	--------

Objective:

- Demonstrate basic computer terminological concepts as to hardware, software and networks
- Communicate effectively with both technical and non-technical colleagues
- Use MIS to enhance decision making
- Build and / or interpret models for planning
- · Organize, summarize and analyze data

Unit - I

Foundation concepts and Information Technologies: Foundation of Information Systems in Business - Competing with Information technology – Computer Hardware & Software

Unit - II

IT in Business Applications: – Data Resource Management – Telecommunication and Networks – E-Business systems

Unit - III

Information Systems in other Business Areas: Enterprise Business systems – E-Commerce systems – Decision support

Unit - IV

Development process: Developing Business using IT - Strategies and Solutions

Unit - V

Management Challenges: Security and Ethics in E-Business – Enterprise and Global Management of Business and IT

Real World Cases: Icongo, Yahoo, IBM, SAP, Oracle, Siebel, Wall Mart

Outcome:

- Give extensive capabilities to manage the digital firm
- Evaluate the role of information systems in today's competitive business environment
- Define an information system from both technical and business perspective
- Distinguish computer literacy with information systems literacy
- Assess the relationship between the digital firm, e-commerce, e-business and internet
- Identify major management challenges to build and using information systems in organizations

Text Book: Management Information Systems, Tenth Edition, James **A.O' Brien** and George **M. Marakas**, McGraw Hill Edition

References

- 1. Management Information Systems, Third Edition, Post and Anderson, Tata McGraw Hill Edition
- 2. Frontiers of Electronic Commerce, Kalakota and Winston, Pearson Education
- 3. Information Technology for Management, Seventh Edition, Henry C.Lucas Jr., Tata McGraw Hill Edition

GOVERNMENT ARTS COLLEGE (AUTONOMOUS), KUMBAKONAM. Computer Graphics and Multimedia

Subject Code: Credits: 2 External Marks: 75 Hours: 2

OBJECTIVE:

To promote students with ideas of computer graphics and its applications.

UNIT - I:

A survey of computer graphics: Computer aided design – presentation graphics – computer art – entertainment – education and training – visualization – image processing – graphical user interface.

UNIT-II:

Overview of graphics systems: Video display devices – Raster scan systems – Random scan systems – graphics monitors and workstations – input devices – hard copy devices – graphics software.

UNIT -III:

Attributes of output primitives: Line attributes – curve attributes – color and grayscale levels – area fill attributes – character attributes – bundled attributes – inquiry functions.

UNIT IV:

Two dimensional geometric transformations: Basic transformation – matrix representation – composite transformation – other transformation.

UNIT - V:

Computer Animation: Design of animation sequence – general computer animation functions – raster animation – computer animation languages – key frame systems – morphine – simulating accelerations – motion specification – direct motion specification – goal directed systems – kinematics and dynamics.

TEXT BOOK:

Computer graphics – Donald Hearn & M. Pauline Baker – Prentice – Hall of India Pvt.Ltd.

REFERENCE BOOK:

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc. (COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - V

WEB TECHNOLOGIES

Subject Code: Credits: External Marks: 75 Hours:
--

OBJECTIVES:

- To understand about client-server communication and protocols used during communication
- To design interactive web pages using Scripting languages
- To learn server side programming using servlets and JSP
- To develop web pages using XML/XSLT
- **UNIT I: WEB SITE BASICS AND HTML:** Web Essentials: Clients, Servers, and Communication. The Internet-Basic Internet Protocols -The World Wide Web-HTTP request message-response message-Web Clients Web Servers. Markup Languages: XHTML. An Introduction to HTML History-Versions-Basic XHTML Syntax and Semantics-Some Fundamental HTML Elements-Relative URLs-Lists-tables-Frames-Forms-HTML 5.0.
- UNIT II: CSS AND CLIENT SIDE SCRIPTING: Style Sheets: CSS-Introduction to Cascading Style Sheets-Features-Core Syntax-Style Sheets and HTML- Style Rule Cascading and Inheritance-Text Properties-Box Model Normal Flow Box Layout-Beyond the Normal Flow-CSS3.0. Client-Side Programming: The JavaScript Language-History and Versions Introduction JavaScript in Perspective-Syntax-Variables and Data Types-Statements-Operators-Literals-Functions-Objects-Arrays-Built-in Objects-JavaScript Debuggers.
- UNIT III: SERVER SIDE SCRIPTING: Host Objects: Browsers and the DOM-Introduction to the Document Object Model DOM History and Levels-Intrinsic Event Handling-Modifying Element Style-The Document Tree-DOM Event Handling-Accommodating Noncompliant Browsers Properties of window. Server-Side Programming: Java Servlets- Architecture -Overview-A Servlet-Generating Dynamic Content-Life Cycle- Parameter Data-Sessions-Cookies-URL Rewriting-Other Capabilities-Data Storage Servlets and Concurrency- Databases and Java Servlets.

- UNIT IV: JSP AND XML: Separating Programming and Presentation: JSP Technology Introduction-JSP and Servlets-Running JSP Applications Basic JSP-JavaBeans Classes and JSP-Tag Libraries and Files-Support for the Model-View-Controller Paradigm- Databases and JSP. Representing Web Data: XML-Documents and Vocabularies-Versions and Declaration-Namespaces- DOM based XML processing Event-oriented Parsing: SAX-Transforming XML Documents-Selecting XML Data: XPATH-Template based Transformations: XSLT-Displaying XML Documents in Browsers.
- UNIT V: AJAX AND WEB SERVICES: AJAX: Ajax Client Server Architecture-XML Http Request Object-Call Back Methods. Web Services: JAX-RPC-Concepts-Writing a Java Web Service-Writing a Java Web Service Client-Describing Web Services: WSDL- Representing Data Types: XML Schema-Communicating Object Data: SOAP Related Technologies-Software Installation-Storing Java Objects as Files.

OUTCOMES:

At the end of the course, the students should be able to

- Design simple web pages using markup languages like HTML and XHTML.
- Create dynamic web pages using DHTML and java script.
- Program server side web pages that have to process request from client side web pages.
- Represent web data using XML and develop web pages using JSP.
- Understand various web services.

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - VI

DATA COMMUNICATION AND NETWORKING

Subject Code: Credits:	External Marks: 75	Hours:
------------------------	--------------------	--------

OBJECTIVE: To develop an understanding, the basic concepts of data communication,

layered model, protocols and interworking between computer networks

and switching components in telecommunication systems.

UNIT I: Introduction to Data Communication and Networking: Fundamental Concepts –

Data Communications – Protocols – Standards – Standards Organizations – Analog and Digital Signals - Bandwidth Basics – Amplitude, Period, Frequency and Phase. Modes of Data Transmission and Multiplexing: Parallel and Serial Communication – Simple, Half duplex and Full duplex - Multiplexing – Types of

Multiplexing – FDM verses TDM.

UNIT II: Transmission Errors Detection and Correction: Error classification – Types of

Errors – Error Detection: Vertical Redundancy Check (VRC) – Longitudinal Redundancy Check (LRC) - Cyclic Redundancy Check (CRC) – Checksum - Error Correction using Hamming code. Transmission Media: Guided Media –

Unguided Media – Shannon Capacity – Digital Subscriber Line (DSL).

UNIT III: Network Topologies, Switching and Routing Algorithms: Mesh Topology – Star

Topology – Tree Topology – Ring Topology – Bus Topology – Hybrid Topology. Switching Basics: Circuit switching – Packing Switching – Message Switching – Routers and Routing – Factors affecting Routing Algorithms – Routing Algorithm Distance Vector Routing. Networking Protocols and OSI Model: The OSI Model

- OSI Layer Functions.

UNIT IV: Data Link Layer: Flow Control: Stop and Wait protocol – Sliding Window

Protocol. Error Control: Go – Back n ARQ – Selective Repeat. Data Link Layer protocols: Asynchronous data link layer – Synchronous Data Link Layer. ISDN:

Back ground of ISDN – ISDN Architecture.

UNIT V: X.25 Protocol: Characteristics of X.25 – Packet Format – Internetworking X.25

Operation Concepts and Devices: Internetworking Devices – Repeaters – Bridges – Routers Gateways. Transport Layer: Transmission Control Protocol (TCP) – User Datagram Protocol (UDP). Application Layer: Electronic Mail – File

Transfer Protocol (FTP) – Telnet.

COURSE OUTCOMES:

- Recognize the technological trends of Computer Networking.
- Discuss the key technological components of the Network.
- Understand and building the skills of sub-netting and routing mechanisms.

• Familiarity with the basic protocols of computer networks, and how they can be used to assist in network design and implementation

TEXT BOOK: Computer Communication Networks –Achyut S Godbole and Atul

Kahate. Tata McGraw Hill.

REFERENCE BOOK: Computer Networks 4th Edition, Andrew S. Tanenbaum, Prentice Hall.

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE) PHP PROGRAMMING

Subject Code: Credits: 5	External Marks: 75 Hour	s: 6
--------------------------	-------------------------	------

OBJECTIVE: To Understand the Concepts of PHP.

UNIT I: Essentials of PHP: Introduction of PHP – Variables – Constants – Understanding PHP's Internal

Data types – Operator and Flow Control:Math– Assignment–Increment and Decrement-String-Bitwise-LogicalOperators-Using IF Statements-IF Else Statements-ELSE IF Statements-Switch

Statements-Using For Loops-While Loop-Do-While Loop-skipping Iteration.

UNIT II: Strings and Array: The String Function-Converting to and from string-Formatting Text String-

Building yourself Some Arrays-Modifying data in Arrays-Deleting Array Elements-Handling Multidimensional Arrays. Creating Functions: Creating functions in PHP-passing Functions Some Data-Using Default Argument-Passing by Reference-Introducing variable scope in PHP-

Accessing global data-Working with Static variables.

UNIT III: Reading data in Web Pages: Handling Text Fields-Handling Text Area-Handling Check boxes-

Handling Radio buttons-Handling List boxes-Handling password controls-Handling Hidden controls-Handling Image Maps-Handling File Uploads-Handling Buttons. Object oriented Programming: Classes-Objects Access to properties and methods-public Access-private access-

constructors and Inheritance-overriding method.

UNIT IV: File Handling: Opening File using fopen-Reading Text from a File Using fgets-Closing a

File.Working with Database:Create My SQL Database -Creating New Table-updating Databases-

Inserting New Data Items into a Database-Deleting Records.

UNIT V: Session, Cookies and FTP:Setting a Cookies-Reading a Cookies-Deleting Cookies-working with

FTP-Downloading Files With FTP-Uploading Files With FTP-Delete a File with FTP-Sending Email. Ajax-Getting Stared With Ajax – Writing Ajax – Create the XMLHttpRequest Object-

Opening the XMLHttpRequest object-Creating XMLHttpRequest Object.

COURSE OUTCOME:

- Write PHP scripts to handle HTML forms.
- Write regular expressions including modifiers, operators, and metacharacters.
- Create PHP programs that use various PHP library functions, and that manipulate files and directories.
- Analyze and solve various database tasks using the PHP language.
- Analyze and solve common Web application tasks by writing PHP programs.

TEXT BOOKS:

"The Complete Reference PHP Covers PHP5.2", McGraw Hill Education, Steven Holzner, 2008.

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - VI

LAB-VI:PHP PROGRAMMING LAB

OBJECTIVE: To Impart Practical Training in PHP Programming Language.

EXPERIMENTS:

- 1. Write a program for Selecting Random Variables.
- 2. Develop a Program for Multiplication Table.
- 3. Design a Program Using string Function and Arrays.
- 4. Write a program Using Controls and Functions.
- 5. Develop a Program and Check Message Passing mechanism between Page.
- 6. Develop a Program Using Parsing Functions (Use Tokenizing).
- 7. Write a Program and Check Regular Expression HTML Functions, Hashing Function.
- 8. Develop a Program and Check File System Functions.
- 9. Design a Program Using Database Operations.
- 10. Develop a Program Using Cookies and session.

COURSE OUTCOME:

- The candidate shall know the basic concepts/components behind the PHP design
- Develop database-driven application using PHP and MySQL
- Test, debug, and deploy web pages containing PHP and MySQL

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

SEMESTER - VI

C# AND ASP.NET

Subject Code:	Credits:	External Marks: 75	Hours:
---------------	----------	--------------------	--------

OBJECTIVE: The syllabi details Concepts, Techniques and Application pertaining to

the Subject in a flexible Style. It discuss about illustrative problems to

reinforce the understanding of the Theory.

UNIT I: Introduction : C# Language – CLR –Base class Library. C# Language Reference:

Identifier – Types – Variables – Expression and Operation – Statement – Inheritance – Access Modifiers – Classes and Structs – Interface – Arrays – Enum

- Delegates - Events - Try statement and Exception - Attributes.

UNIT II: Programming .Net Framework: Common Types – Math – String – Collection –

Regular Expression – Threading. Base Class Library Overview: Core types – Text –Collection – stream I/O – Networking – Security – Reflection – Serialization –Remoting – Web services – Data Access – XML – Graphics –Web based Application – Configuration – Assemblies – Diagostics and Debugging –

Components and Tools support.

UNIT III: Developing ASP.Net Applications: ASP.Net Application – ASP.Net File Types –

The Bin Directory – Application Updates – A Simple Application from Start to Finish – Code Behind – Web form Inheritance Explained – Complied code behind files – Compiled Multiple files into one Assembly – The Global.asax

Code Behind – Application Events – Understanding ASP.Net Classes.

UNIT IV: Web Form Fundamentals: Server Controls – HTML Server Controls – Viewstate

The HTML Control Classes – Events – HTML Control Classes – The Page
 Classes – Assessing HTML Server Control – Web Control: The Basic Web
 Control Classes – The web Control Tag – The Web Control classes: Units –

Enumerated Values - Colors - Font - List controls - AutoPostBack and Web

Control Events.

UNIT V: VS.NET: The Web Form Designer – Writing Code. Validation and Rich Controls

The Calendar Control - The Adrotator - Validation. Overview of ADO.Net:
 Introduction - Characteristics of ADO.Net - The ADO.Net Object Model.
 ADO.Net Data Access: SQL Basics - SQL Select Statement - Creating Connection - Command with Data Reader - Updating a data - Accessing

Disconnected data – Multiple Tables – Updating Disconnected Access.

COURSE OUTCOMES:

- Create user interactive web pages using ASP.Net.
- Create simple data binding applications using ADO.Net connectivity.
- Performing Database operations for web applications.
- Identify and resolve problems (debug /trouble shoot) in C#.NET web applications.

• Identify Industry defined problem and suggesting solution(s) using .NET application.

TEXT BOOK: "C# Essentials", Ben Albahari, Peter Drayton & Brand Merrill

Shroff publishers & distributors PVT. Ltd.

"ASP.Net: The complete Reference", Matthew MacDonald,

McGraw-Hill Edition 2002.

REFERENCE BOOK: C# and .Net framework – N.Manjula & S.Suresh, Charulatha

Publications

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE) (Effective for those admitted from 2020-2021 onwards)

SEMESTER - VI E-COMMERCE

OBJECTIVES: To promote and encourage use of computers and e-commerce in mentioned areas by means of training and development. To provide Consultancy in fields of using facilities and expertise of the Institute

UNIT I:- Electronic Commerce - Electronic Data Interchange - Benefits of EDI - Value Added Networks - Electronic Commerce over the Internet - Internet Commerce Examples - CommerceNet - Electronic Mail: Introduction - Computer communication System - ISO open System Interconnection Model - Internet Mail - Internet Address - SMTP - Domain Naming System.

UNIT II:- Electronic Communication: PCs and Networking – Networking Topologies – Communication Media-VSAT (Very Small Aperture Terminal) – Access Schemes – VSAT Network Components. Internet: Introduction – Internet Communication protocols – Internet Services and resources – Internet Mail – Internet Search – Concern about Internet.

UNIT III:- EDI (Electronic Data Interchange): Introduction – Cost and Benefits. Components of EDI Systems: EDI Standard – EDI Software – Communication of EDI message - Notification.
 EDI Implementation Issues: EDI Service Bureaus – Standalone Electronic Data Interchange – Integrated Electronic Data Interchange.

UNIT IV:- Internet and Extranets for E-Commerce – Ecommerce – Commerce Over Internet: EDI over the internet –FTP based messaging for EDI – Mailing List for EDI – Web Based Commerce – Commerce Over Extranets. E-Commerce in India: EDI in India – Internet in India-Laws for E-commerce in India.

UNIT V:- Concerns for E-commerce Growth: Internet Bandwidth and Technology Issues – Bandwidth Issues – Technology Issues for Internet – ATM Technology – Fibre Optic Networks – High Capacity Storage Systems. Security Issues: Security Concerns- Security Solutions – protocols for Secure Messaging – Public key Certificates- Electronic cash over Internet.

TEXTBOOK: E-COMMERCE, The Cutting Edge of Business, Tata McGraw-Hill Publishing Company Limited, New Delhi. Kamlesh K Bajaj, Debjani Nag

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE) (Effective for those admitted from 2020-2021 onwards)

SEMESTER – VI LINUX CONCEPTS

Unit I

Linux Introduction and Installation: Linux-Advantages-Red Hat Linux-New Features-Installation procedures and Methods. Using Desktop-GNOME-KDE-Linux Commands Accessing and Running Applications

Unit II

Installing Red Hat Linux Applications, Running Window Application, Running Window, DOS and Macintosh Applications –Tools for using Internet and Web.

Unit III

Administration: Understanding System Administration: Root login-super user-GUI tools, commands and Log files-Configuring Hardware-File System and Disk Management-Monitoring performances.

Unit IV

Setting Up and Supporting users: Creating user accounts – Setting user defaults – Creating Desktops-Modifying and Deleting Accounts.

Unit V

Security Issues: Hacker versus Cracker-Password Protection- Protection from break-in-Filtering Network Access-Firewalls-Detecting Instructions – Encryption techniques

Text Book

1. Christopher Negus "Red Hat Linux 9 Bible", WILEY- Dreamtech India Pvt.Ltd,

New Delhi, First Edition, 2003

Reference Book

1. Thomas Schenk, "Red Hat Linux System Administration", Techmedia, New Delhi, 2003.

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

DOTNET LAB

Subject Code:	Credits:	External Marks:	Hours:
=			

OBJECTIVES:

- Introduce to .Net IDE Component Framework.
- Programming concepts in .Net Framework.
- Creating website using ASP.Net Controls.

EXPERIMENTS:

- 1. Create an ASP.Net web form for Login form using Html Server Controls.
- 2. Design an ASP.Net web form for Student Details.
- 3. Apply Validation Controls in ASP.Net web form with creation of CAPTCHA.
- 4. Design an ASP.Net to retrieve data from Database using Execute reader and Execute Scalar.
- Create a web application using ADO.Net to perform basic data manipulations.
 Insert, Modify, Delete, View.
- 6. Create an application for Adrotator using XML File.
- Create an application using Data Grid control to access information from table in SQL server.
- 8. College Portal.
- 9. Job search portal.
- Create an application using Dropdown List to access information from table in Ms-Access/SQL server

COURSE OUTCOMES:

- Create user interactive web pages using ASP.Net.
- Create simple data binding applications using ADO.Net connectivity.
- Performing Database operations for web applications.
- Identify and resolve problems (debug /trouble shoot) in C#.NET web applications.
- Identify Industry defined problem and suggesting solution(s) using .NET application.

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

NME-I: PRINCIPLES OF INFORMATION TECHNOLOGY

Subject Code:	Credits:	External Marks: 75	Hours:
---------------	----------	--------------------	--------

OBJECTIVE: To Provide the Basic Concepts in Information Technology

UNIT I: Introduction to Computers - Generation of Computers - Classification of

DigitalComputer - Anatomy of Digital Computer.

UNIT II: CPU and Memory - Secondary Story Devices - Input Devices - Output

Devices.

UNIT III: Introduction to Computer Software - Programming Language - Operating

Systems - Introduction to Database Management System.

UNIT IV: Computer Networks - WWW and Internet - Email - Web Design

UNIT V: Computers at Home, Education, Entertainment, Science, Medicine and

Engineering - Introduction to Computer Security - Computer Viruses, Bombs,

Worms.

COURSE OUTCOMES:

- Understand basic concepts and terminology of information technology.
- Have a basic understanding of personal computers and their operations.
- Be able to identify issues related to information security.

TEXT BOOK:

1. Fundamentals of Information Technology, Alexis Leon And Mathews Leon,

Vikas Publishing House Pvt. Ltd, 2009.

REFERENCE BOOK:

1. Fundamentals of Computers and Information Technology, M.N Doja, 2005

Re-accredited with 'A' Grade by NAAC & Affiliated to Bharathidasan University

B.Sc.(COMPUTER SCIENCE)

(Effective for those admitted from 2020-2021 onwards)

NME - II: INTERNET CONCEPTS

Subject Code:	Credits:	External Marks: 75	Hours:
---------------	----------	--------------------	--------

OBJECTIVE: To understand the working Principles of Internet

UNIT I: What is Internet? The Internet's underlying Architecture

UNIT II: Connecting to the Internet – Communicating on the Internet

UNIT III: How the World Wide Web works. Common Internet tools

UNIT IV: Multimedia on the Internet – Intranet and shopping on the

Internet

UNIT V: Safeguarding the Internet

COURSE OUTCOMES:

- Define the Internet and explain the historical developments that have led to the Internet of today.
- Illustrate how a connection to the Internet is effected and how nodes in the Internet are named and addressed.
- Describe the various services that the Internet provides.
- Evaluate the role of the World Wide Web and explain how web pages are constructed and made available over the Internet.

TEXT BOOK:

1. How the Internet Works, Preston Gralla, Pearson Education, Eighth

Edition, 2006

REFERENCE BOOK:

1. Internet for Everyone, Alexis Leon, S.Chand (G/L) & Company Ltd;

Second Edition, 2012.
